Roll No. ....

# **BCA-20**

## **System Programming**

Bachelor of Computer Application (BCA-11/16/17)
Sixth Semester, Examination, 2018

Time: 3 Hours Max. Marks: 80

Note: This paper is of eighty (80) marks containing three (03) Sections A, B, C. Attempt the questions contained in these Sections according to the detailed instructions given therein.

#### Section-A

### (Long Answer Type Questions)

**Note:** Section 'A' contains four (04) long answer type questions of nineteen (19) marks each. Learners are required to answer *two* (02) questions only.

1. What are the Advanced Assembler Directives ? An assembly program contains the statement :

$$X = EQU = Y + 25$$

Indicate how the EQU statement can processed if:

- (i) Y is a back reference.
- (ii) Y is a forward reference.
- 2. List various phases of Language Processor. Explain any *one* phase in detail.

A-92 **P. T. O.** 

[2] S-855

- 3. Explain types of grammars. Write a regular expression for a language containing a binary string which does not contain two consecutive 0s or two consecutive 1s anywhere.
- 4. Consider the statement a = b + c \* 10, where a, b, c are of type float. Show the translation of the given statement by different phases of compiler to produce assembly language statement.

#### Section-B

### (Short Answer Type Questions)

**Note:** Section 'B' contains eight (08) short answer type questions of eight (08) marks each. Learners are required to answer *four* (04) questions only.

- 1. What is peephole optimization? Explain any *two* optimization transformation in detail.
- 2. What is pure and impure interpreter? Explain design of an editor.
- 3. Explain Absolute Loader with example.
- 4. What is main task of semantic analysis phase? Explain inherited and synthesized attributes in detail with example.
- 5. State different storage allocation strategies. Explain static allocation and stack allocation in detail.
- 6. Explain left recursion, left factoring and backtracking in top down parsing.
- 7. What is macro in programming language? Write an algorithm for macro definition.
- 8. Explain the following:
  - (i) Execution Gap
  - (ii) Compiler
  - (iii) Interpreter
  - (iv) Language Migrator

[3]

S-855

#### Section-C

## (Objective Type Questions)

**Note:** Section 'C' contains ten (10) objective type questions of one (1) mark each. All the questions of this Section are compulsory.

- 1. The output of lexical analyser is:
  - (a) A set of regular expressions
  - (b) Syntax tree
  - (c) Set of tokens
  - (d) Strings of character
- 2. Syntax directed translation scheme is desirable because:
  - (a) It is based on the syntax
  - (b) Its description is independent of any implementation
  - (c) It is easy to modify
  - (d) All of the above
- 3. A top down parser generates:
  - (a) Rightmost derivation
  - (b) Rightmost derivation in reverse
  - (c) Leftmost derivation
  - (d) Leftmost derivation in reverse
- 4. Macro-processors are ..........
  - (a) Hardware
  - (b) Compiler
  - (c) Registers
  - (d) None of the above

[4] S-855

- 5. The term environment in programming language semantics is said as :
  - (a) Function that maps a name to value held there
  - (b) Function that maps a name to storage location
  - (c) The function that maps a storage location to the value held there
  - (d) None of the above
- 6. The lexical analyser takes ...... as input and produces a stream of ...... as output.
  - (a) Source program, tokens
  - (b) Token, source program
  - (c) Either (a) and (b)
  - (d) None of the above
- 7. A grammar is meaningless:
  - (a) If terminal set and non-terminal set are not disjoint
  - (b) If left hand side of a production is a single terminal
  - (c) If left hand side of a production has no non-terminal
  - (d) All of the above
- 8. The optimization technique which is typically applied on loops is :
  - (a) Removal of invariant computation
  - (b) Peephole optimization
  - (c) Constant folding
  - (d) All of the above

[5] S-855

- 9. Resolution is externally defined symbols is performed by :
  - (a) Linker
  - (b) Loader
  - (c) Compiler
  - (d) Assembler
- 10. Which of the following is used for grouping of characters into tokens?
  - (a) Parser
  - (b) Code optimization
  - (c) Code generator
  - (d) Lexical analyser
